

## Off-Site Backup by Pivotal Elements.

### Product Description

Off-Site Backup is a perfect online backup solution that automates data backup to secure remote storage. This service combines an easy to use interface with powerful functionality making a disaster recovery plan simple, reliable and affordable.

### Benefits:

- Keep backups in a **remote location**
- **Restore backups anytime from any place** where you have internet connection
- Setup **suitable schedule** for backups or backup every changed or new file immediately with **Continuous Data Protection**
- **Protect backups** by encrypting your data
- **Compress backups** to speed up data transfer and reduce backup space usage.

### Features:

**Managed Service.** We will monitor the backup processes to ensure your files are being backed up.

**Backup Schedule.** Automate backups by setting up suitable time and frequency.

**Real-Time Backup.** Backup everything automatically. Off-Site Backup runs as Windows Service and tracks folders for new or changed files to backup them immediately.

**Encryption.** Protect your data from unauthorized access by choosing an encryption algorithm and setting a unique encryption key. Off-Site Backup encrypts all you data before it is uploaded for storage.

**Compression.** Reduces the size of your backups to save time and money spent on data recovery plan. Off-Site Backup compresses data prior to transfer.

**Intelligent Bandwidth Scheduler.** Control the bandwidth throttling in real-time to set, for instance, the backup to consume all available bandwidth during the off hours and on the weekends while consuming only 10% of bandwidth during the working hours.

**Local Backup.** Set up local backup if you want to send only a subset of your data off-site and keep the rest on your local backup storage.

**Block Level Backup.** Backup only changed parts of the file. Off-Site Backup detects these parts and automatically uploads it to the remote storage.

### Backup Plans.

	Price /month	Price /year
<b>50 GB</b>	<b>\$ 13</b>	<b>\$ 150</b>
<b>100 GB</b>	<b>\$ 19</b>	<b>\$ 225</b>
<b>200 GB</b>	<b>\$ 30</b>	<b>\$ 350</b>
Additional Computer*	\$ 7	\$ 75

\* License for an additional computer to share the storage space of the main backup plan. Main Backup plans include a license for 1 computer.

## FAQ.

Q: If I purchase one license can I activate Off-Site Backup on two computers?

A: Off-Site Backup is licensed per computer. If you want to run it on two computers you need to buy an additional license.

Q: Will Off-Site Backup copy opened files?

A: Yes, Off-Site Backup leverages Microsoft Volume Shadow Copy Technology to backup opened files

Q: How does Off-Site Backup secure my data?

A: Off-Site Backup offers several industry standard strong encryption algorithms to protect your data.

Q: Does Off-Site Backup copy all files every time it runs?

A: No, Off-Site Backup identifies files modified since last backup and only copies such files. This makes subsequent backups run much faster

Q: Can Off-Site Backup copy only modified portion of the file? I want to backup my Outlook PST file, but it is 2GB and I don't want to copy the whole file every time.

A: This is called block-level backup and it is fully supported with Off-Site Backup.

Q: Does Off-Site Backup keep older versions of the file?

A: Yes and this feature gives you an ability to restore a file to a certain point in the past.

Q: If I delete a file on my local computer is it also deleted from backup storage?

A: Yes, the file will be deleted from the online storage too. By default, though, the file will stay on the online storage for 30 days to prevent accidental deletion. We call it Smart Delete.

Q: Can Off-Site Backup copy the data immediately as it changes (e.g. new files are added or existing files are modified)?

A: Yes, this is what we call Real-time backup. You can select this option in the Backup Wizard Scheduling step. By using a low level Windows API this feature comes with zero impact on your computer performance.
